LAZION
Cert & Testing

ABOUT LAZION

Lazion Cert & Testing specializes in telecom device certification and pre-launch testing across GCC & North Africa markets.

With strong expertise in regulatory compliance and approval workflows, we deliver end-to-end certification, documentation, and technical validation aligned with regional regulatory standards.

Our direct engagement with mobile network operators enables us to verify device performance with high accuracy, ensuring all tests meet real-world operator requirements and the highest industry quality.

Core Services

- Telecom device regulatory certification for UAE and Oman (TDRA & ECAS), covering Smartphones, Tablets, MiFi, CPE, PCs, IoT devices, and Accessories.
- Technical report and documentation assessment, including RF, EMC, SAR, DoC, RoHS, user manuals, and regulatory labeling requirements.
- Operator requirement validation and feature assessment across GCC, North Africa, and South Africa markets.
- Pre-launch field testing for Smartphones, Tablets, CPE devices, and modules—covering Voice, Data, and Network features.
- Long-term OEM partnership programs supporting continuous certification, testing, and market readiness.

GCC Regulatory Certification

- Lazion Cert & Testing provides complete regulatory certification services for your devices across major GCC authorities, including TDRA, ECAS (UAE), TRA (Oman), CRA(QAR).

- Our team streamlines the entire approval process, enabling you to export and launch your products smoothly in these markets.

- All you need to do is provide the required test reports and documentation — our engineers will review, verify compliance, and handle submissions directly with the relevant government authorities to ensure fast and successful certificate issuance.

Pre-Launch Device Testing

Technologies: 5G | LTE | VoLTE | VoWiFi | VoNR | Wi-Fi | Bluetooth

- Network behavior validation across 2G/3G/4G/5G.
- VoNR, VoLTE, VoWiFi, CSFB call Stability.
- Throughput & Supplementary services test.
- Operator feature validation (IMS Configuration, APN, ECC, roaming).
- Operator baseline (SPN, new feature requirements, Carrier Aggregation, ENDC, Supported Bands).
- Issue logging + recommended fixes to R&D.
